

I oppose cell phone use aboard commercial aircraft because:

1) It creates a security threat by allowing terrorists unrestricted communications while onboard aircraft.

2) The close seating on aircraft does not allow privacy to conduct phone conversations or insulate oneself from other's phone conversations.

3) Flight attendants have enough to do aboard aircraft now.

4) There is no evidence that cell phone use would not interfere with the navigational and communications systems commercial aircraft depend on for safe operation.

5) Many passengers are not equipped with the common sense to thoughtfully use cell phones when and where appropriate-look around you when on any public conveyance now!
